Griechische Landschildkröte (*Testudo hermanni hermanni*) im Habitat als Beute von Vögeln

Hermann's tortoise (Testudo hermanni hermanni) as a prey species for birds in its natural habitat

Abstract

The discovery of bird predation on a Hermann's tortoise in the south of France is described. It was clearly preyed by birds of the family Corvidae. Comparisons with bird predations on *Gopherus agassizii* are made and the role of human factors in increasing the numbers of birds is discussed.

Key words

Testudines: Testudinidae, *Testudo hermanni hermanni*, bird prey
